How many alcoholic beverages do you consume in a week? _____

Do you use recreational drugs? Yes / No

Our goal is for you to achieve your full potential and inspire you to live a long, healthy, and happy life. Your first visit is a free consultation to discuss your symptoms and goals with a medical professional. We may send you out for lab work to access health status. Once we have created your personalized treatment plan, we can start the therapy that is right for you.

What to bring for your free consultation:

- ✓ Your completed IV therapy intake form
- ✓ A list of all medications you take including supplements/vitamins
- ✓ A copy of your most recent blood work is helpful

If you are coming in for an infusion, make sure you are well hydrated prior to your visit. Dehydration can make it very difficult to insert an IV. We also suggest eating a high protein meal before your appointment.

Most IV infusions can be completed in as little as 30 minutes. If you do not have time for IV therapy, we offer many vitamin injections that are quick and convenient and can help you manage your health by increasing energy, reducing stress, and preventing illness.

B12-20.00- This injection will help with mood, keep your heart healthy and give you the extra energy you need.

Vitamin D3 20.00- injecting vitamin D is the best way to get your vitamin D levels to a therapeutic level. Therapeutic levels of vitamin D are shown to help prevent colds, flu and other viruses. It can also help with mood, weight loss, and chronic muscle and bone pain.

Amino Acid Blend 25.00- This blend will help with building strong muscles, maintain a healthy weight, and give you extra energy.

Lipo-Mino 25.00- Lipo-Mino blend can help you reach your weight loss goals by speeding metabolism and burning fat.

Glutathione 50.00- A quick way to amp up overall health and speed the healing process.
